Additional Information

Contingencies

Solar SME Inc. is always ready to discuss Utility permits, and any issues with breaker boxes, trenching, shade service panels and roof spacing in compliance with your City Codes / HOA permit when we go over your proposal. We will help you to get solar rebates. We offer an Apples to Apples guarantee to ensure our consumers the best value for their investment.

Warranties
• 25-year Power Production warranty
• 25-year workmanship warranty
• 25-year Material warranty
• 25 year Labor warranty
• 30 Years extended warranties(Labor, material and roof leakage warranty in additional $1000)
• Lifetime connection with an online monitoring system

Hardware/installation

Solar SME is licensed with over 10 years' experience providing solar installations to satisfied homeowners and businesses across the states of Texas, Florida, Maryland, Virginia, Maryland, Georgia, Pennsylvania, Illinois, New Jersey, New Mexico and Colorado. than 7 to 10 years.

How Solar guarantees Return on investment

• Savings on utility bills
Solar saves on energy costs and electric bills. One of the leading reasons to go solar is that you can either eliminate or significantly reduce your electric bill. Your savings are far greater over the period of next 10 to 25 years since electricity prices will continue to rise, your savings will continue to grow every year over the 25+ year lifespan of your solar panel system. Similarly, many consumers can now get a leveled cost of energy of $0.10 per kilowatt-hour. When you compare this to the average amount, you will pay to your utility for power over the next 25 years that is exactly the time Companies ensure warranties for solar panels, the average consumer with a $150 per month power bill can see savings in the range $60,000 - $100,000 plus over the life of a solar system. Any energy post that warranty period is an additional bonus for the lifetime. Energy demand is higher in the mornings and then early in the evening. This is the period when the price of the electricity peaks. Solar energy performs its maximum production capacity during these times. Eliminating or reducing one of your largest monthly expenses alone makes all the difference. More so, you can sell any excess electricity from your solar panels back to the grid.

• Tax Credit
Federal solar tax credit gives you a dollar-for-dollar reduction against your federal income tax. Starting in 2020, the value of the tax credit will step down to 26%, and then again to 22% in 2021. After 2021, the tax credit for residential solar ends. There are state tax programs and rebates in your area that encourage solar too, but the benefits of solar aren't just financial.
.
• Property Value Increases
Many studies the most notable of which are from Wells Fargo and Lawrence Berkeley National Lab have shown that Solar panel system ownership increases your property resale value by 3 to

4%, while third party ownership (e.g. leasing) does not. That automatically secures your investment on solar from day one.

• Clean Energy
Solar energy produced by solar panels will help reduce the production of potentially dangerous and environmentally hazardous sources of energy. Solar energy will not only help you revert your carbon footprint but also enhance your systems to ensure you live in a carbon-free home. There are some states in the U.S. that encourage individuals to invest in other people's roofs to create a lot more solar energy.
Solar energy is an environmentally friendly and healthy alternative for fossil fuels as it is non-polluting, clean, reliable and renewable source of energy. It does not pollute the air by releasing harmful gases like carbon dioxide, nitrogen oxide or Sulphur oxide. Above all, solar energy does not require any source of fuel to produce electricity and thus eliminates any transportation of fuel or storage of radioactive waste. Decreased environmental pollution will naturally create much healthier atmospheric conditions for current and future generations.

• Easy Install & Zero Maintenance
Unlike wind and geothermal power stations that require them to be tied with drilling machines, Installing Solar Panels does not require any wires, cords or power sources. It can be installed on the rooftops, which means no new space is needed and each home or business user can generate their own electricity. Moreover, it can be installed in a distributed fashion which means no large-scale installations are needed. With advancements in technology and an increase in production, the cost of solar panels has come down greatly.
Once installed you will enjoy the benefits for generations while injecting either none or almost any amount for its maintenance. Overtime, if your energy needs change and it would be a lot easier to upgrade on an existing system. Also, Solar works exquisitely well in remote locations where running power lines would not be cost effective.

• Solar Energy Life Span
As long as there is sun, solar energy can be deployed anywhere. Even when it is cloudy, you can still use the solar panel system. More so, contrary to general belief that solar panels life span is around 20 to 25 years that is generally confused with the warranty of quality Solar Panels. Most manufacturers offer the 25-year standard solar panel warranty, so power output should not be less than 80% of rated power after 25 years. Consequently, Solar scientists insist that the life span of a Solar Power is at least Lifetime and most times it can last up to generations. A 33W solar panel (Arco Solar 16-2000) outperformed its original factory specifications 30 years after it was manufactured and World's first modern solar panel still works after 60 years. Solar Panel technology and quality today are much more robust, durable, and effective like any other technology in the world. Scientific and research evolution has improved and upgraded everything present from its origination overtime. For that reason, modern Solar panels are surely designed to outlast and outperform any of its technological predecessors. Research available in the following link establishes it as a matter of fact.

Cash Purchase

What's covered by installation warranty

We offer Apples to Apples guarantee to ensure our consumers best value for their investment.
Warranties
- 25 year Power Production warranty
- 25-year workmanship warranty
- 25-year Material warranty
- 25 year Labor warranty
- Lifetime connection with an online monitoring system

Loan

Reamortizing Loan

This loan allows you to pay down the principal after you receive your tax credit refund. This will reduce your subsequent monthly payments.

Additional notes

Best financing plan with best warranties from Sunova.
25 years labor warranty from Sunnova
25 years workmanship warranty from Sunnova
10 years roof leakage warranty from Sunnova

Note: All these warranties are additional to the warranties offered by Solar SME Inc.

Your next steps

Send a Message	Ask the installer questions or request quote updates using the Message Center, which keeps your email address private. We'll email you when the installer replies.
Schedule a Call	The installer's scheduling system may ask for your email or phone number to contact you directly. If you prefer, you can schedule using the Message Center.
Request Site Visit	Use the Message Center to schedule a time for the installer to look at your property and discuss options in person.
Request Changes	Ask the installer to provide an update to your quote based on your preferences for financing, equipment, and more.
Call Installer	See Phone Number

* EnergySage calculates the values above based on: values provided by the installer for this quote, installer-estimated loan terms assuming good credit history, the electric bill information you provided, historical market utility rate data, an energy cost inflation estimate of 0% (source: EIA 10-year MD avg.), Federal ITC of 30% of net cost for purchases, and carbon conversion factors provided by the US EPA. Cash Purchase savings projections are also based on estimates of future SREC value. Learn more about SRECs. Check with your utility about rates and fees that may apply to your solar installation. MD SREC estimates represent a conservative estimate based on market projections over the next 15 years.
